FACULTY OF MANAGEMENT SCIENCE AND INFORMATICS

1. Foreword

The ***Faculty of Management Science and Informatics*** was established at the University of Žilina in July 1990.

The Faculty primarily specialises in managing activities in extensive systems. These include problems of managing and optimising the transfer of objects, as well as the designing of integrated interactive information systems for decision making support including economic connections and technical background.

The Faculty is interested in control and information systems, management and transport with application in many areas of using.

The activities of the Faculty are determined by new trends in information and communication technologies. The priority of the Faculty is to provide continual links between research, education and the career prospects of graduates. Basic educational and scientific activities consist of:

- Design and realization of technical means for information and management systems
- Analysis and synthesis of regulation and automation systems
- Control and optimisation of goods and passenger transport
- Creation, control and optimisation databases
- Management, marketing, logistics, entrepreneurial skills, creation of transport and communication systems
- Data transmission and data processing
- Issues concerning multimedia information systems, graphic systems and simulation of components for communication networks, systems and mathematical modelling

Faculty provides educational programmes in accordance with University Law No: 131/2002 in following accredited programmes of study:

Full time 3-year **Bachelors degree** programme in:

- ***Informatics***
- ***Computer Engineering***
- ***Management***

The programme is a well-rounded higher education on the 1st degree.

Additional 2 years **Masters degree** programmes of study are in the following accredited fields:

- ***Information Systems***
- ***Information Management***
- ***Computer Engineering***
- ***Business Informatics***
- ***International logistic***

The PhD.- programme at the Faculty involves the following scientific disciplines:

- ***Applied Informatics***
- ***Management***
- ***Control of Transportation Systems***

PhD-programme is the highest level of higher education. The aim of PhD-programme is to prepare the graduate student for independent, creative scientific-research work by giving the student comprehensive theoretical knowledge and mastery of the methods of scientific work as demonstrated in a given scientific project. The programme lasts three years (full time). The PhD.- programme requires 3 semesters of advanced study, satisfactory completion of a comprehensive examination, then, after 3rd semesters, submission of a written dissertation, based on independent original research that must be a significant contribution to the field of study. Oral examination that is a defence of the dissertation. The graduate is granted the scientific academic title „**Philosophiae Doctor**“ (abbr. **PhD.**)“, which is written in abbreviation after the candidate’s name.

16. Intranet of Faculty

It was in 1992 when the Intranet of FMSI was created and in the meantime was continuously improving. It came into existence from the needs to process and to make accessible lot of information to students and to pedagogical staff, as well. The intranet of FMSI is a part of University Intranet, which allows access to SANET (Slovak Academic Network).

Conception of Intranet FMSI is based on the fact, that every Department is in possession of the own network, which is connected through ETERNET (10BaseT, 100BaseT or Gigabit Ethernet) to the faculty network. Apart from there are a special segments of this network - research laboratories for multimedia, parallel distributed systems, clusters, database systems, operating systems, e-business, e-learning etc.

There are following information systems at the Intranet of FMSI in service: Information about study at the Faculty, news, messages, events, economics, personal data, research data and information, e-learning and distant learning subsystems, study results and assessments

Analogy models for real time simulation experiments of digital control algorithms.

- Models SISO (Single input and single output).
second and third - order systems with variable damping ratio , proportional or integrate performance.
- Models MIMO (Multiple input, multiple output- 2 input and output)

There is 6 SISO models:
second order system with variable damping ratio
second order system with variable time constant
first order system with variable time constant
first order system.

The model It can by use as a MIMO plant or SISO plant first to sixth - order. The gain of the plants (step response) it can be continuously or step change (0.1, 1, 2, 5).

There is also possibility to change magnitude of disturbance and step switch of output disturbance.

- Models SISO with non-linear gain, transport delay and no minimal phase.

The same model as in the point a), with possibility to switch non-linear gain or transport delay.
or step response with no minimal phase.

- Analogy model of heat exchanger station.
